How to read “Unattributed”

- Most signups still show as Unattributed — empty acquisition {}, not proven Direct typed-URL traffic.
- GA historically stripped UTMs from page_location (fixed). Email/SMS/Meta will attribute better on new traffic.
- Mama Data Bitly was removed 8 Nov 19:53; direct Email UTMs should appear in GA going forward.
- Daily Pulse now goes only to: sotiropoulos.y / kapranou.n / boikos.y / gad.g @caredirect.com.

Natal invite email · live Moosend KPIs

RECIPIENTS	OPEN RATE	CLICK RATE	DB SIGNUPS
2.126	54.2%	3.9%	1
delivered list	1.153 unique	82 unique	Email UTMs stored

Funnel math

Click-to-open	**7.1%**
Signup from click	**1.2%**
Signup from recipient	**0.1%**
Unsubscribe rate	**0.7% (14)**
Subject	**Mama Data GR HeyMaa_Emails (Natal)**
UTMs	**utm_source=Email · utm_medium=Email · utm_campaign=Nata**

Manager takeaways · Email

- Opens are excellent (~54%) — the list responds to the invite story.
- Clicks (~3.9%) and attributed signups (1) are the bottleneck — CTA + landing need work.
- Moosend Top Links were still Bitly-heavy historically (78 vs 6 direct). Direct UTMs are live after 8 Nov.
- Expect GA Email channel and more attributed signups only after new clicks on non-Bitly links.

Campaign window 16 Oct – 7 Nov 2026

SMS SENDS	CLICKS	DB SIGNUPS	LANDING UTMS
136	TBD	0	Natal
SMS HEYMAA	short-link	utm_source=SMS	SMS / SMS / Natal

Setup

Name	**SMS HEYMAA**
Short link	**https://bit.ly/4hXfQbL**
Expands to	**https://heymaa.ai/?utm_source=SMS&utm_medium=SMS&utm_campa**
Window	**16/10/2026 → 07/11/2026**
As of	**07/11/2026**

Manager takeaways · SMS

- 136 SMS sent in the Natal window — volume is modest vs email (2.1k recipients).
- Zero SMS-attributed signups in DB so far — likely UTMs lost via short-link / GA strip (now fixed) or no click-through.
- Next: capture Bitly click count for the SMS link, and confirm landing always keeps utm_source=SMS.
- Reuse best-performing email CTA language in SMS for a second wave if list allows.

Kickoff OA · Ads Manager

SPEND	IMPRESSIONS	REACH	ADS MGR RESULTS

Ads Manager results: 0

Pixel reality check

- Ads Manager: 0 Complete Registration / Website Subscribe. First-party DB: 3 Meta signups (fbclid).
- Root cause was missing Pixel CompleteRegistration on signup — fix shipped; also fire Subscribe for IG.
- Events Manager flagged heymaa.ai as Health & wellness — category review requested 9 Nov (EU data risk).
- heymaa.ai added to Pixel allow list; Automatic Advanced Matching turned On (EMQ was ~6/10).
- Rough Meta CPA on first-party signups: €33,40 (spend ÷ DB Meta signups) — not Ads Manager CPA.

GA4 snapshot (last saved)

SESSIONS	ENGAGED	DIRECT SHARE	KEY EVENTS
120	92.5%	77.5%	0
2026-10-15→2026-11-05	111 sessions	UTMs were stripped	sign_up not marked

Channels still missing in GA window: Email, Paid Social, Organic Search, Referral, Paid Search, SMS

Priorities for the next 2 weeks

1. Wait for Meta health-category review; keep CompleteRegistration + Subscribe firing on signup.
2. Confirm Mama Data CTAs are direct www.heymaa.ai with Email UTMs (no Bitly) — re-check GA Email channel.
3. Pull Bitly/SMS click count for the 136 sends; retarget non-clickers if possible.
4. Mark GA4 sign_up as a key event so channel → registration is visible.
5. Tighten email CTA — opens are strong; clicks/signups are the conversion hole.
6. Align IG ad optimization to Complete Registration (not Website Subscribe).
7. Push trial→paid: drips are enrolling — watch mid-trial conversion copy.

Revenue posture

Recognized MRR: €0,00

Cash · 30d: €0,00 · Lifetime: €0,00

Growth is acquisition- and engagement-led; paid conversion is the next chapter.
